

Case Study

Tree removal and scrub clearance within Japanese knotweed Areas

Client – Taylor Wimpey Ltd

Project Length – 2 days within a 2 year wider project

Project Value – Complete project £30,300.00

Project – Pennycross Plymouth

Japanese knotweed infestations extended down a steep slope into a dense area of mature trees and directly into the footprint of proposed infrastructure works. Brush cutters combined with specialist arboriculture works were required to allow access for complete clearance of the knotweed. This was then followed up with eradication using a herbicidal treatment programme.
